TeleDynamics Added as Distributor of Syspine VoIP Phone System

(RENO, Nev., Sept. 2, 2008) — Quanta Computer announced today the addition of TeleDynamics as a distributor of the Syspine® Digital Operator Phone System.

Syspine, an advanced IP phone system designed for small businesses with up to 50 employees, was created for ease of use, low costs and integration with other technologies. Featuring Microsoft® (Nasdaq: MSFT) Response Point™ technology, Syspine has a powerful voice-recognition system that can be linked with a company's internal phone directory, as well as an individual's Microsoft Office Outlook® address book.

"TeleDynamics is well-established in the interconnect and dealer community, so we are very glad to form this partnership," said Syspine director of sales and marketing Robert Gordon. "They are also very big in the small business phone system arena, which is a perfect fit for us both."

Established in 1981, TeleDynamics is a leading telecom equipment wholesale supply and fulfillment company based in Austin, Texas. TeleDynamics carries a wide inventory of electronic products, including everything from basic telephone accessories, cordless telephones, audio products and general consumer electronics to the most advanced digital business phone systems on the market today. Customers include major retail stores, telephone companies, interconnect companies, Internet retailers and electronics dealers throughout North America.

"This is exciting news. Syspine is not only our first Microsoft application, it's also such a feature-rich and innovative phone system," said TeleDynamics CEO James 'Happy' Feller. "It is a great benefit to our company and a strong complement to our sales channel."

For more information on the Syspine Digital Operator Phone System, visit www.syspine.com. TeleDynamics can be found online at www.teledynamics.com.
